FRAOL ASHEBIR DEMISSE

LinkedIn | +251 974 07 97 48 | fraaol.vercel.app | fraolashebir84@gmail.com | GitHub

Skills

- JavaScript | TypeScript | Python | React.js | Next.js | Node.js | Express | FastAPI | Redux | OOP | Microservices | Framer Motion
- OpenRouter | Gemini API | Pydantic | Zod | REST APIs | GitHub Apps| GitHub Webhooks | GitHub | Stripe API
- PostgreSQL | Supabase | MongoDB | MySQL | MSSQL | Vercel | Railway | Git | English, Amharic – *All professional proficiency or above*

Projects

- **Veris** – AI Pull Request Review & Risk Analysis Platform (Next.js, TypeScript, Supabase/PostgreSQL, GitHub App, OpenRouter, Zod)
  GitHub-integrated pull request analysis platform that automatically reviews PRs, classifies risk, and generates structured merge recommendations with evidence-backed findings.
  - Built GitHub App integration with webhook ingestion, OAuth authentication, and automated PR synchronization
  - Implemented an AI analysis pipeline with structured validation (Zod), confidence scoring, and deterministic decision tracing
  - Developed scope and consistency analysis to detect risky changes, missing work, and review recommendations
  - Link to live Demo.
- **Getdodos** – Tutoring Marketplace Platform (React.js, Node.js, Supabase/PostgreSQL, Stripe)
  Full-stack two-sided marketplace connecting students and tutors with integrated payments and session management.
  - Built Stripe payment processing, scheduling, and secure document handling
  - Designed a production backend with Supabase (PostgreSQL) and role-based access control
  - Link to live Demo.
- **AppealMD** – AI Dental Insurance Appeal Generator (Next.js, FastAPI, Pydantic, Gemini API)
  AI tool that classifies denied dental insurance claims and generates structured appeal letters.
  - Built a Pydantic-validated classification and generation pipeline
  - Designed a privacy-first architecture using placeholder-based document generation
  - Link to live Demo.

Experience

Student Developer — **Unity University** — **04/2022 – 04/2026**

- Developed and maintained multiple student-facing web apps, improving UI usability by 30%.
- Designed dynamic frontend layouts with React and built backend APIs with Node/Express.
- Integrated AI tools like ChatGPT and GitHub Copilot to boost code quality and reduce dev time.
- Led 3+ group projects, providing technical direction and version control setup (Git).
- Successfully contributed to multiple college projects, demonstrating effective group collaboration.

Full-stack Developer Trainee — **Evangadi Tech** — **02/2023 - 07/2023**

- Completed 16-week full-stack bootcamp, mastering the MERN stack through hands-on projects.
- Collaborated in Agile teams to build fully functional apps, including an e-commerce and a dashboard app.
- Participated in weekly code challenges and implemented feedback to improve code efficiency.

- Udacity Full Stack Web Developer [Certificate]

Soft Skills

- Strong communicator | Detail-oriented | Team collaborator | Creative problem-solver | Adaptive learner | Leadership in group projects

Education

Bachelor of Science — **Unity University** — *Addis Ababa, Ethiopia* — **04/2022 - 04/2026**

- Major in Computer Science
- Relevant Courses: Data Structures, Algorithms, Software Engineering, Database Systems
- Capstone Project: Built a health monitoring mobile app using Flutter, React, and MongoDB
